

Avadex Application with OMEX Suspension Fertiliser

Accurate and Efficient

Blackgrass control is one of the biggest challenges facing farmers. Save time and money this autumn by combining application of Avadex Excel 15G with OMEX suspension fertilisers, offering a single pass application of highly effective blackgrass control and autumn fertiliser.

Why Use Avadex Excel 15G

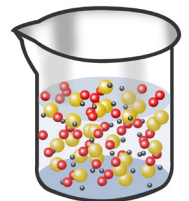

Avadex offers the strongest foundation to your grass weed control strategy, and is vital for resistance management.

It boosts efficacy of other graminicides because of its unique mode of action, and can be used on winter barley. There are no varietal restrictions.

Suspension Fertilisers from OMEX

Suspensions are concentrated liquid fertilisers. The viscosity of the liquid fertiliser ensures that Avadex remains evenly distributed within the tank mix, without settling or floating.

Applying P & K as a suspension is the most accurate method of application, using specialist sprayers capable of covering up to 150ha/day generally with 36m booms and GPS guidance/steering.

Advantages of combining OMEX Suspension Fertiliser and Avadex as a Tank Mix

- Excellent efficacy of the Avadex Excel 15G granules which are:
 - Distributed evenly across the soil surface
 - Held on clods – maintaining 100% soil cover
 - Activated by the moisture in suspension fertiliser
- Full manufacturer back-to-back tank mix agreement
- The most accurate application at 36m width, right up to the field margin or buffer zone
- No farm labour required
- No storage, no handling, no big bag disposal, no wastage

Application guidelines

For best results Avadex Excel 15G should be applied to fine firm seedbeds pre-emergence of the crop and weeds. Winter wheat should be drilled to a depth of 4cm.

OMEX suspension fertilisers with Avadex included are applied by OMEX's team of highly trained and experienced contractors, all of which are qualified with certification and NRoSO membership. They specialise in applying suspension fertilisers and Avadex using dedicated sprayer machinery.

Please note, the use of Avadex Excel 15G should be recommended by a BASIS registered advisor, and there is a minimum order size of 100ha/visit.
